

Heads or Tails

Heads or Tails is a virtual coin toss program created with Python. It will randomly tell the user “Heads” or “Tails.” The program should generate a random number, either 0 or 1. Then the program will use that number to print out Heads or Tails.

My Role

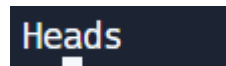

The Heads or Tails program is an individual project I created back in the early Covid days. Therefore, I am the programmer of this project.

The Difficulties and How to Deal with It

Luckily, I face no difficulties during the creation process of this program.

The Output – How it Works

The program will automatically generate a random number, and based on that, the program will decide whether that number is assigned for heads or tails.

A screenshot of a terminal window with a dark background. The word "Tails" is displayed in a light blue, monospaced font.A screenshot of a terminal window with a dark background. The word "Heads" is displayed in a light blue, monospaced font.
